Under the authority of the *Pest Control Products Act*, Health Canada's Pest Management Regulatory Agency (PMRA) has added new uses on head lettuce, leaf lettuce and tomatoes to the product label of Tatoo Fungicide, containing technical grade propamocarb hydrochloride. The specific uses approved in Canada are detailed on the label of Tatoo Fungicide, *Pest Control Products Act* Registration Number 29554.

Corresponding MRLs were proposed in the consultation document published on 15 December 2011, Proposed Maximum Residue Limit PMRL2011-54, *Propamocarb Hydrochloride* . The PMRA received no comments in response to this consultation.

To comply with Canada's international trade obligations, consultation on the proposed MRLs was also conducted internationally by notifying the World Trade Organization, as coordinated by the Standards Council of Canada. No comments were received as a result of the World Trade Organization consultation.

The following MRLs take legal effect as of the publication date of this document and either replace or are in addition to the MRLs already established for propamocarb hydrochloride.

Established Residue Limits for Propamocarb Hydrochloride

Common Name	Residue Definition	MRL (ppm)	Food Commodity
Propamocarb hydrochloride	propyl [3-(dimethylamino)propyl]carbamate hydrochloride	200	Leaf lettuce
		150	Head lettuce
		5.0	Tomato paste
		2.0	Tomatoes[a]

ppm = parts per million

[a] The MRL replaces the 0.01 ppm MRL previously established for tomatoes, based upon greenhouse use, due to the addition of field tomatoes to the Tatoo Fungicide label.

A complete list of pesticide MRLs established in Canada, as of the date indicated, can be found on the Maximum Residue Limits for Pesticides webpage in the Pesticides and Pest Management section of Health Canada's website.
